Impact of R&I Policy at the Crossroads of

POLICY DESIGN

IMPLEMENTATION

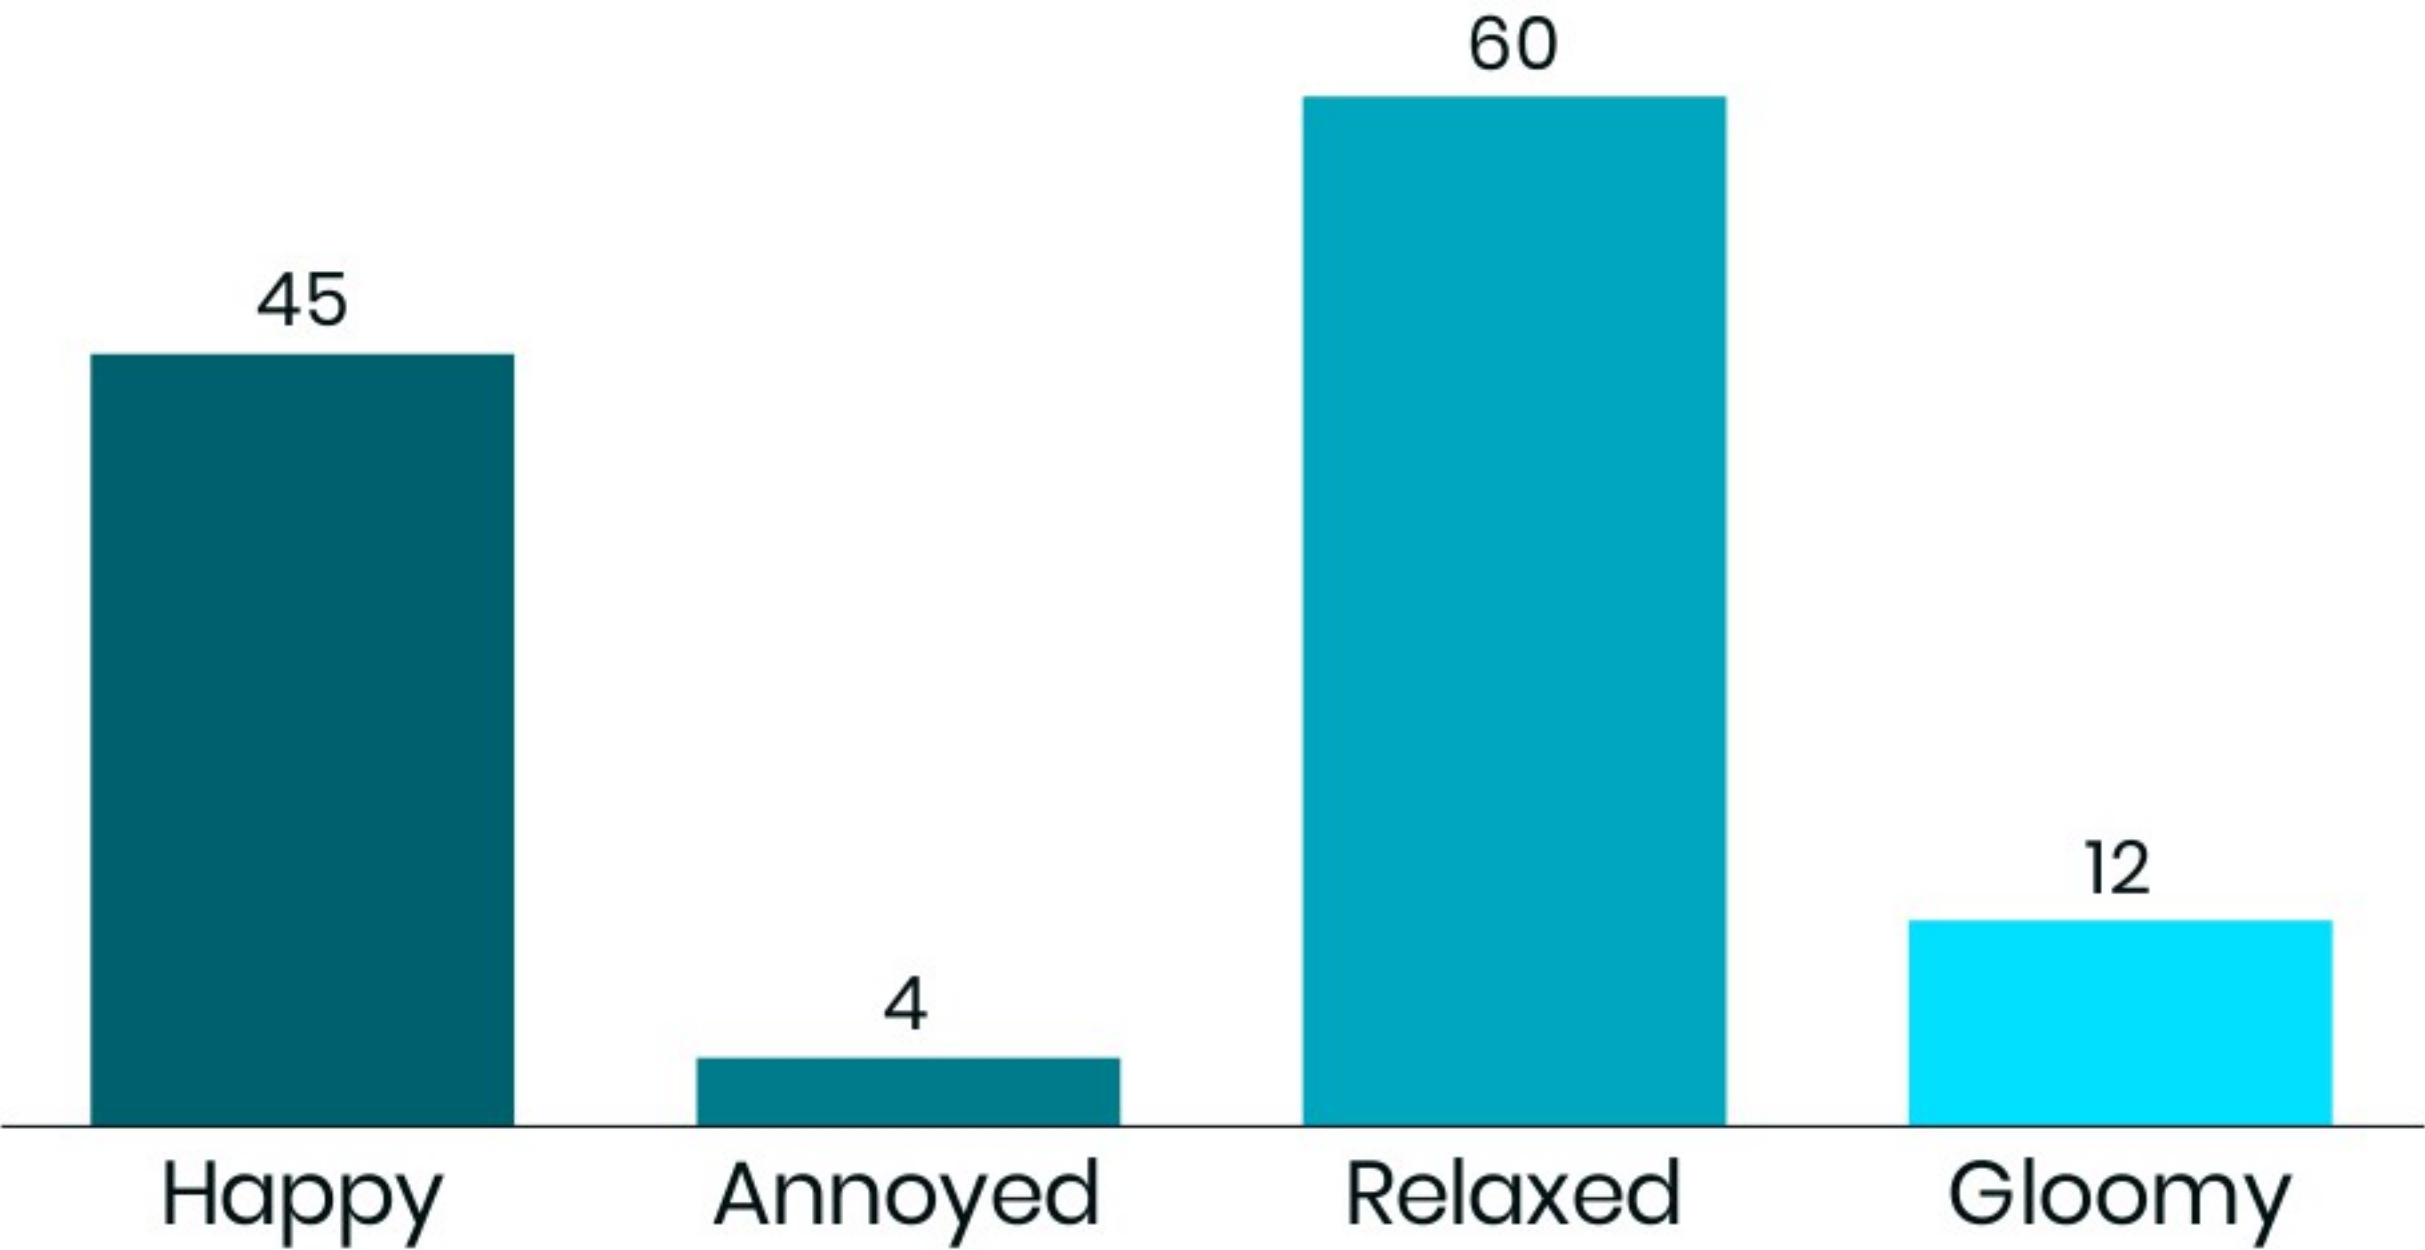

EVALUATION

 Federal Ministry
Republic of Austria
Transport, Innovation
and Technology

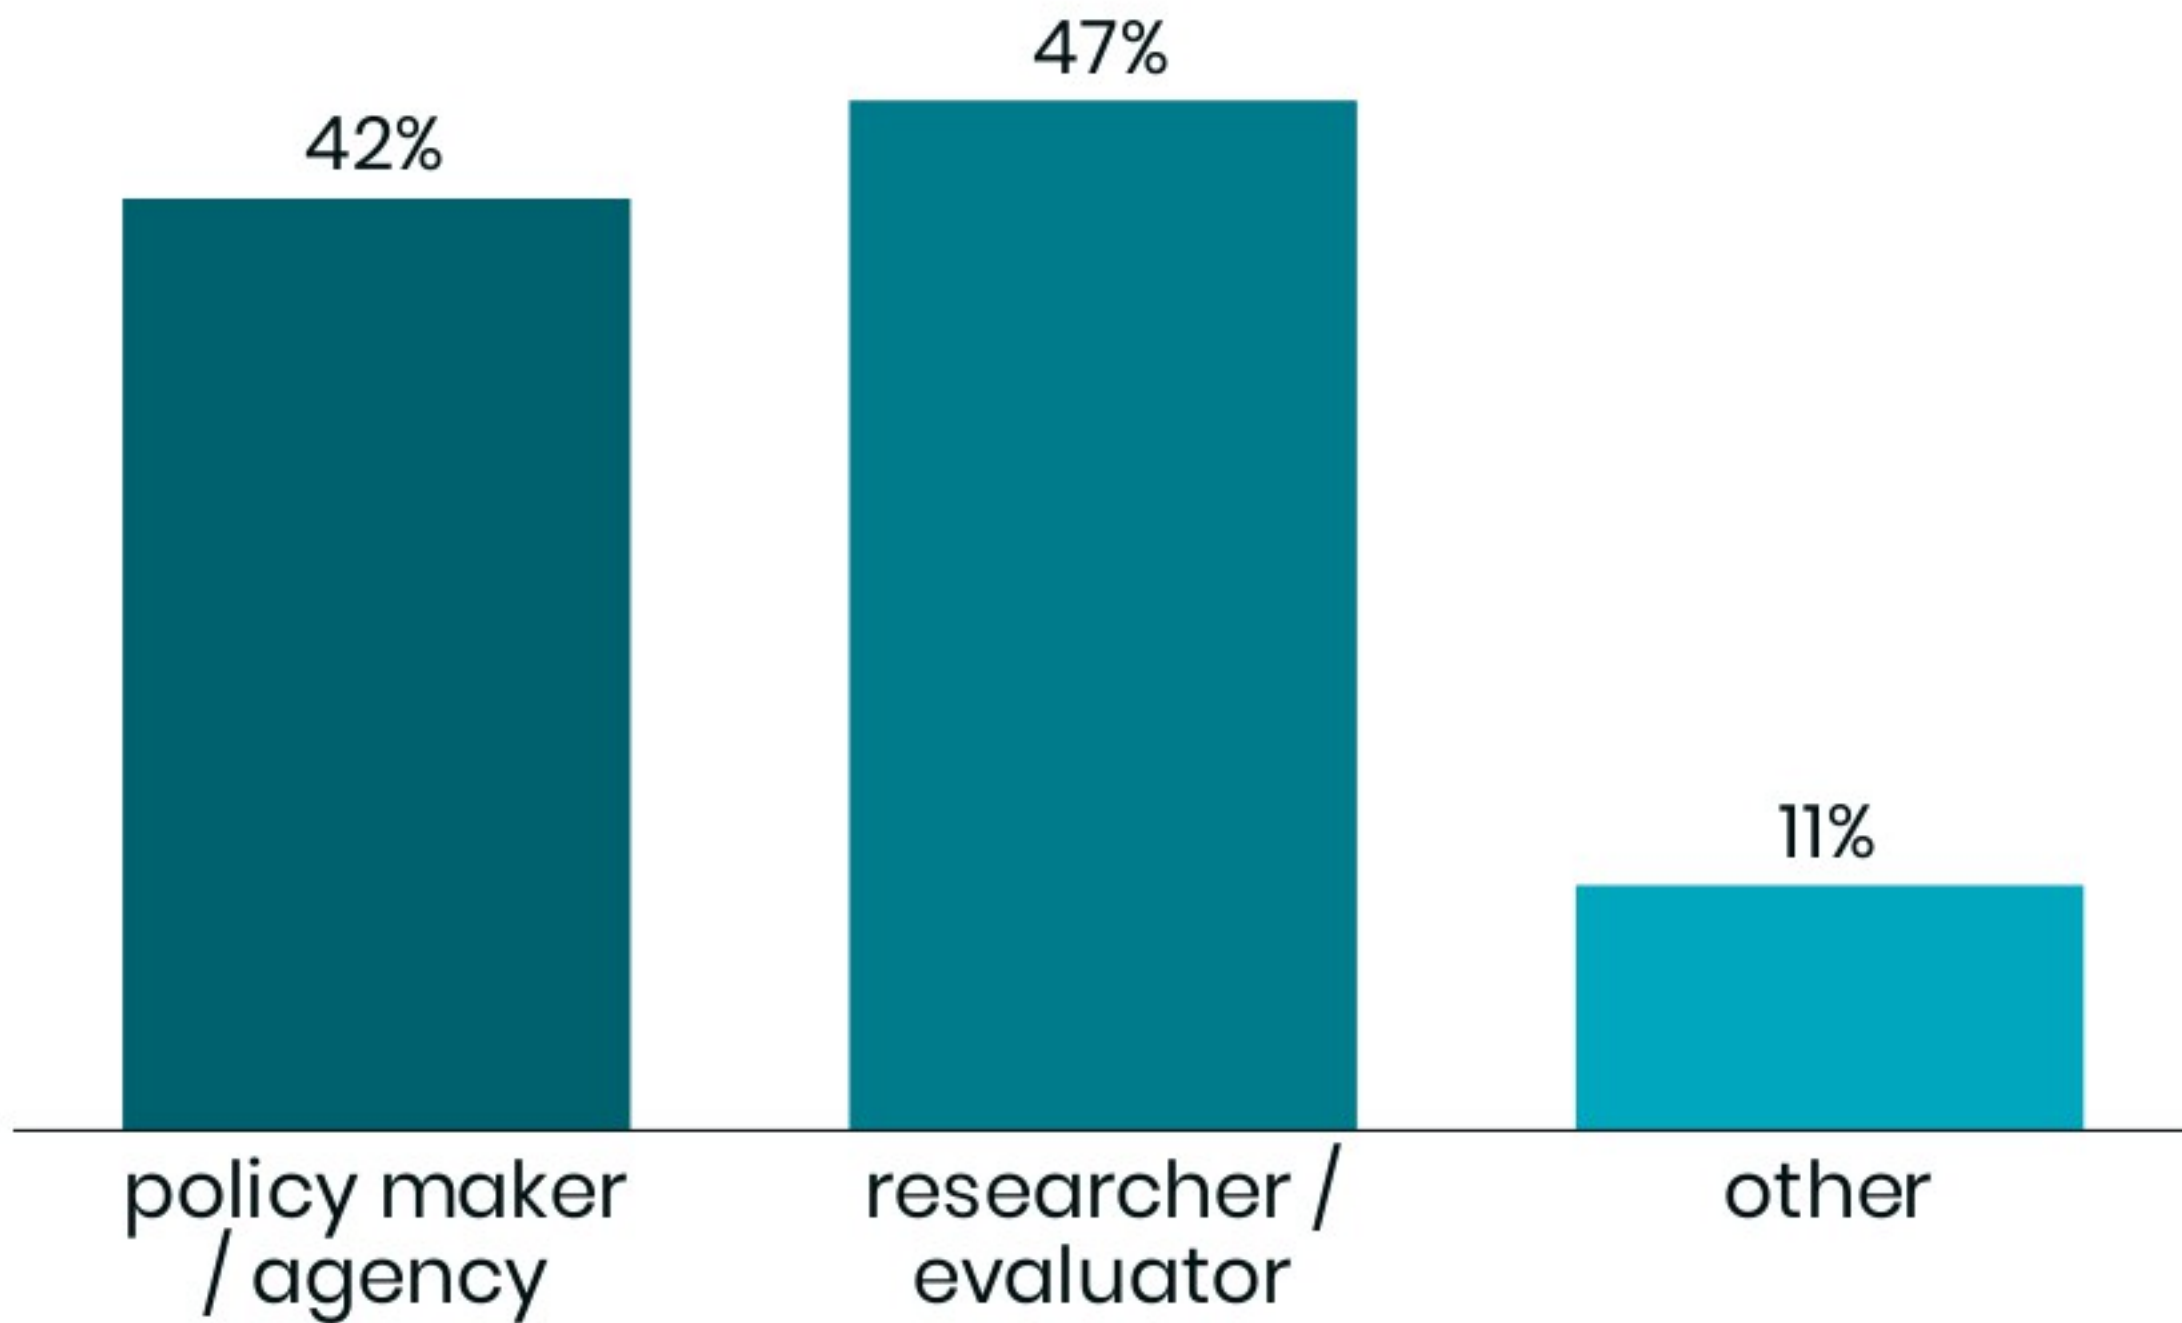

Welcome to mentimeter

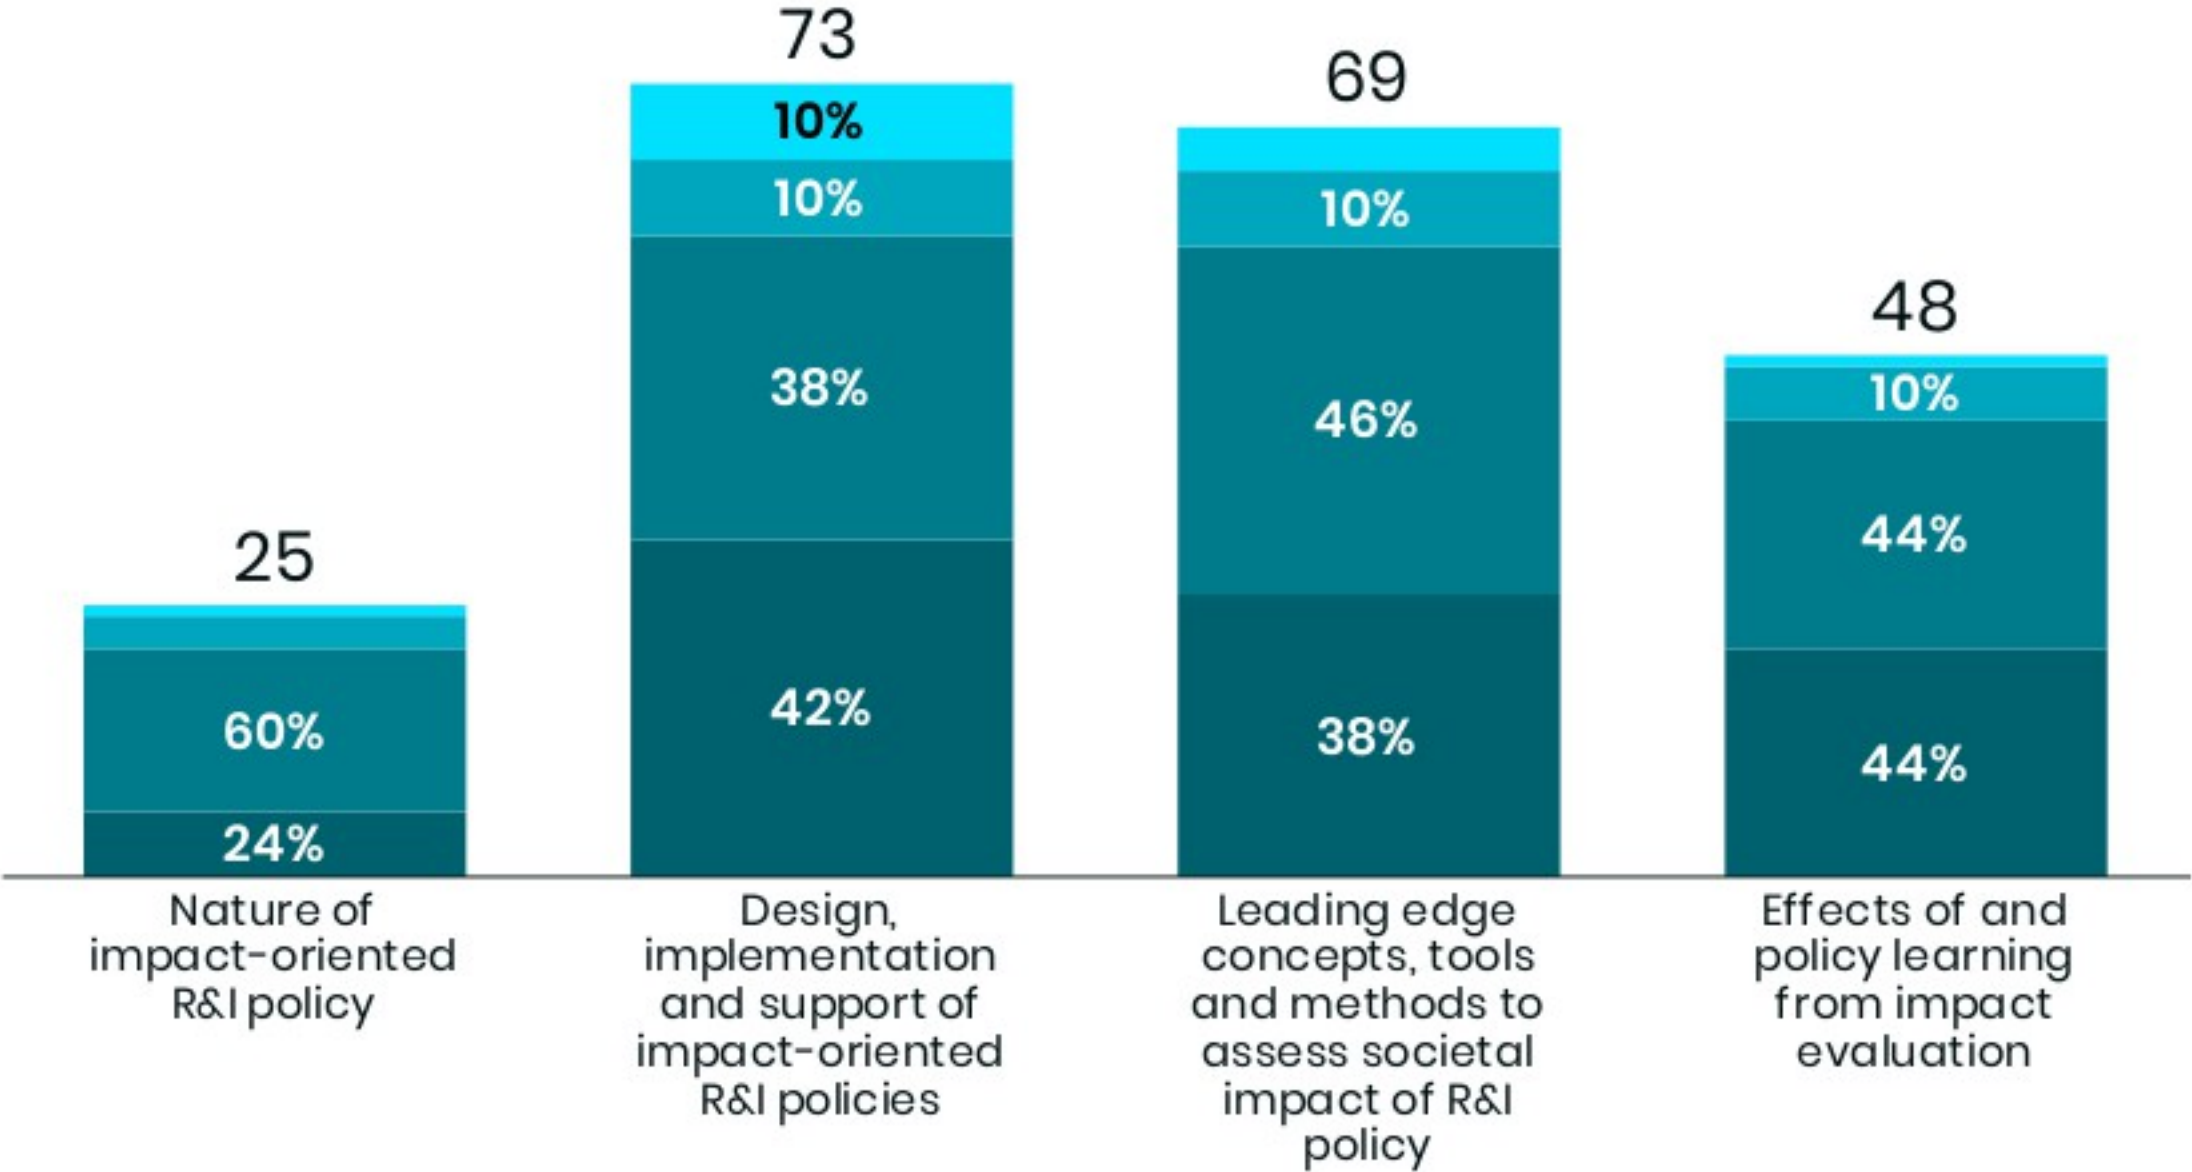

How are you feeling right now?

Which group do you primarily belong to?

Which of the conference areas do you mostly look forward to?

Strongly disagree

We are able to measure the social impact of R&I policy

2.7

We are able to attribute R&I impacts to specific policies

2.8

We are able to radically change our R&I funding instruments

2.9

Strongly agree

EVALUATION

 Federal Ministry
Republic of Austria
Transport, Innovation
and Technology

1.3

Where do you see the biggest room for improvement?

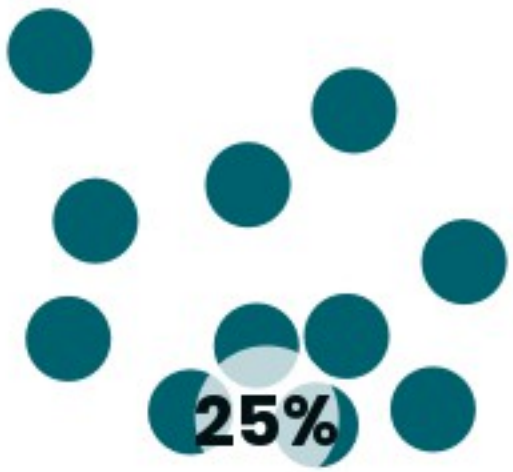

In the preparation of the evaluation: questions, assignments

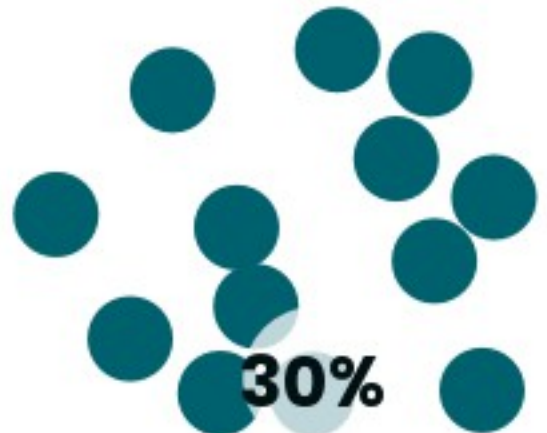

In the implementation: quality of evaluations

In the framework conditions: budgets and time frames

In the processing by the clients: discussion, implementation of recommendations

In the discussion with a broader audience: media, parliament, etc.

Impact of R&I Policy at the Crossroads of

POLICY DESIGN

IMPLEMENTATION

EVALUATION

 Federal Ministry
Republic of Austria
Transport, Innovation
and Technology

2.1

Strongly disagree

Missions should be an important part of STI policy in the future

3.8

For implementation of missions, you need substantially new approaches to governance

4.3

Missions can be more easily implemented at the national than at the international/EU level

2.8

Missions should be more narrowly defined in order to be successful

3.4

Strongly agree

Where do you see the greatest challenges in the implementation of missions?

Ambition

Lack of political leadership

academia- industry
collaboration

Consistent and enduring
politics

interest groups stronger
than mission governance

Political commitment and
leadership

Coordination between
Ministries

Governance Mission
specification

special budget

Where do you see the greatest challenges in the implementation of missions?

Too many sub-strategies

Concrete definition

Adequate funding

As it was mentioned- good governance is a challenge at national and higher levels

Too Many Missions

Fragmented policy areas

Getting the necessary actors to agree on a narrow enough focus in order to head towards the same goals

Building support

Appropriate policy mix
(consistent design and evaluation)

Where do you see the greatest challenges in the implementation of missions?

joint understanding of the Mission break then down to process indicators great goals vs classical funding Implementation

Clear definitions of our challenges

Resistance to new governance by Administration

Undercritical budgets

Uncoordinated governance structures

The long Term Financial Support

Collaboration between industry and science actors/participants in order to transfer research ideas/prototypes to the market and increase economy growth and social interactions

Will real missions be selected?

Connecting high level goals with actions on the ground

Where do you see the greatest challenges in the implementation of missions?

Consensus among stakeholders
Changing the governance sub-system
Diversity Sustained commitment

Overambitious

Lack of public discourse about necessary societal missions

Learning by government

Definition of mission. Government of broader missions, as light as possible. Coordination between the stakeholders with broad missions.

Breaking down the challenges to goals and also operationalization towards making IA possible

Priorities/ ranking of different missions

Integration of the new kid in the already populated block! We have The grand challenges, we have smart specialisation, that all need prioritisation. Lets link missions to what is already working. Missions at EU level guide national complementarity.

Lukewarm support by governments, too technocratic approach instead of political discourse

Where do you see the greatest challenges in the implementation of missions?

Use of new Technologies for public involvement

A wide range of mission

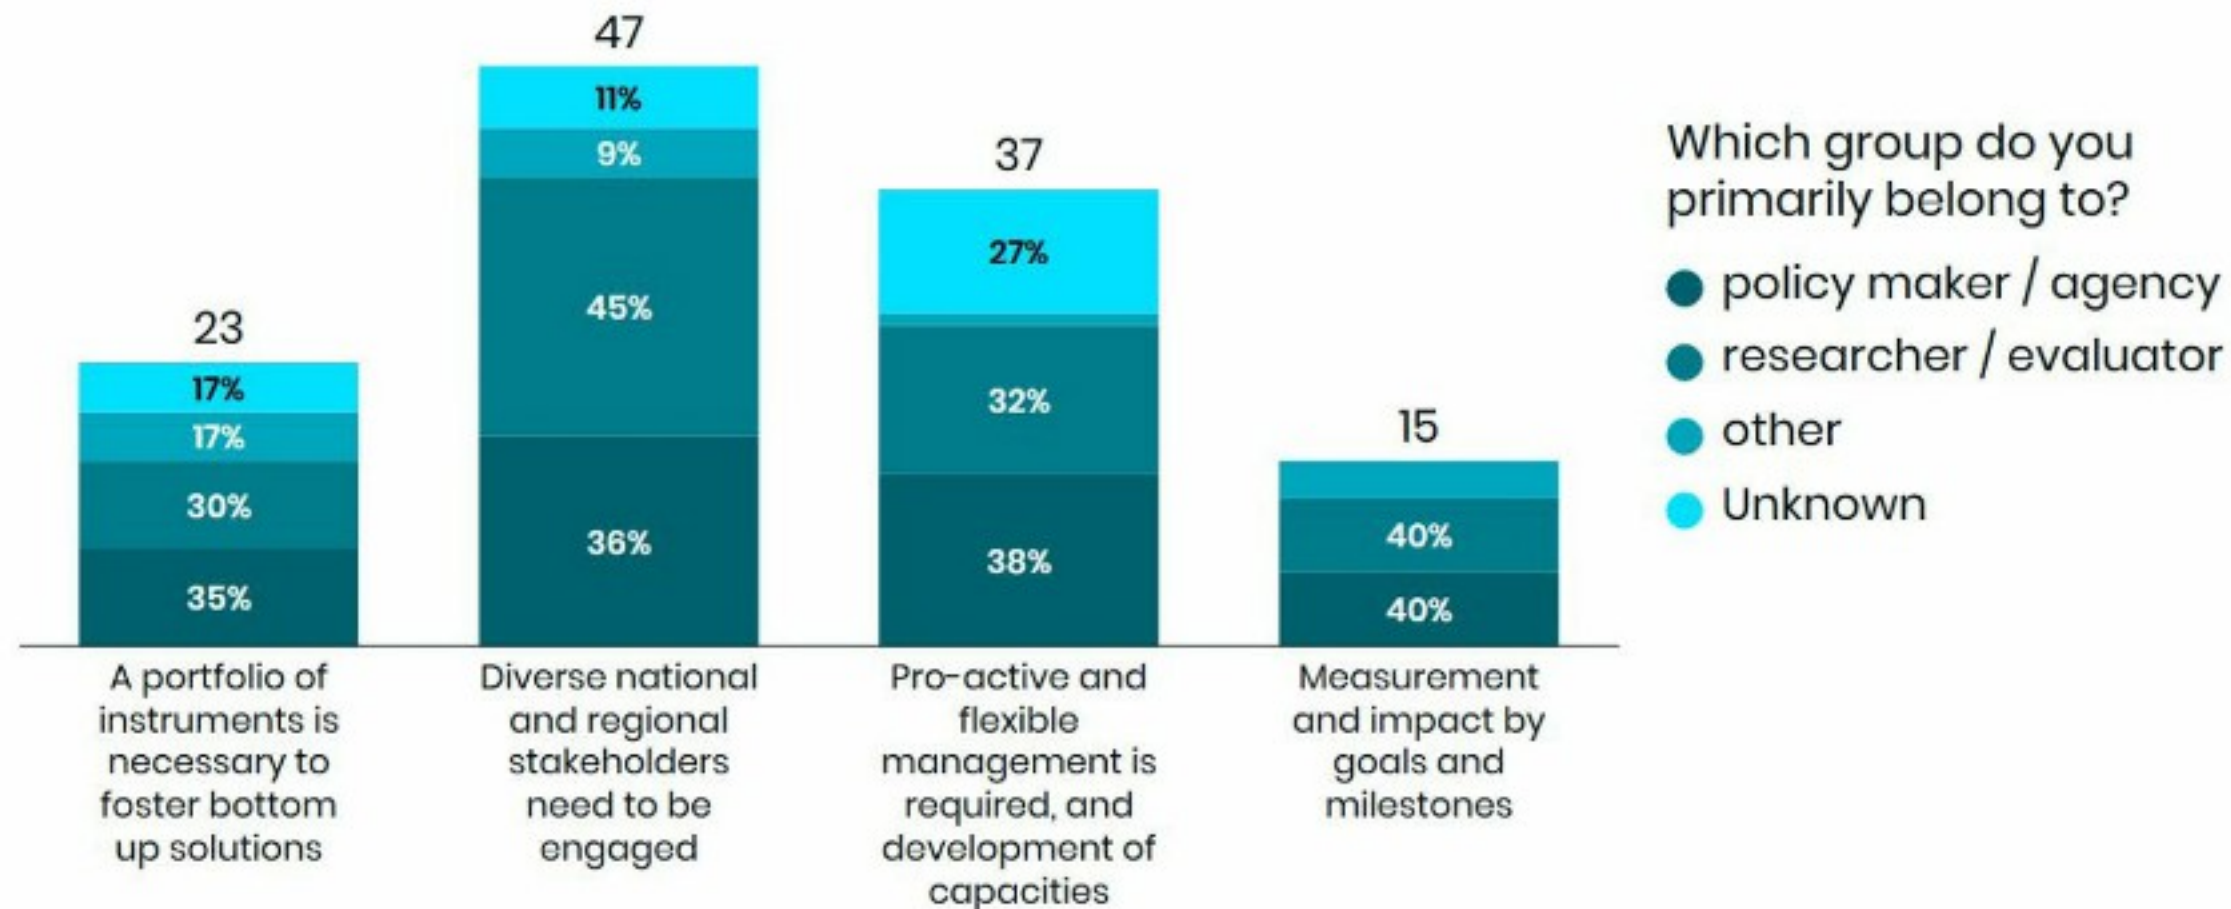

New sustainable and self-tuning instruments

What are the most important ingredients for successful mission-oriented policies?

Go to www.menti.com and use the code **70 39 06**

o you think is most important for missions to succeed?

as discussed yesterday ...

What can we learn from the experiences with mission oriented policies in the past / in other countries?

In which of the proposed areas for Horizon Europe's pillar 2, targeted STI-policies would have the highest impact?
